February 25, 2013

Ms. Marlene H. Dortch, Secretary
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Re: Measuring Broadband American Program, GN Docket No. 12-264

Dear Ms. Dortch:

On February 6, 2013, representatives of broadband providers, public interest groups, companies, and other organizations met in person and via conference call with Commission staff to discuss the Commission's broadband measurement and performance program for broadband performance on mobile handsets. The agenda of the meeting included discussion of privacy related current work items, Android application feedback and changes, and review of schedules and milestones.¹

James Miller, Senior Attorney Advisor Electromagnetic Compatibility Division (EMCD), opened the meeting discussing progress of the privacy review and review drafts being discussed in the working group for a short-form privacy notice and stakeholders' Code of Conduct. He discussed plans for the group to continue work drafting a volunteer Terms and Conditions. He expressed the staff's view that significant progress had been made and the privacy review would be concluding on schedule to support the planned enterprise beta testing deployment.

Mr. Miller introduced Mr. Sam Crawford, SamKnows, who presented feedback and changes to the Android testing application, and reviewed the 2012 schedule and 2013 pending milestones. Mr. Crawford discussed that work in the privacy review had directed changes from the initial versions of the software's data collection and usability features. He discussed aspects of the proposed testing schedules and answered questions regarding how much data the tests would use. He explained that data used by the application and other features such as the timing of the calculations of total data consumption would be easily configurable by users in a menu setting.

Meredith Whittaker, Google Research, explained that Measurement Lab (M-Lab) resources would not be made available for the FCC program's mobile testing, citing conflicts with the M-Lab's open science focus and the mobile program's proposed privacy approaches to anonymous data collection and processing approaches. Ms. Whittaker explained that M-Lab would continue support for the fixed program's measurement efforts.

¹ A list of attendees and all documents circulated for the meeting are made available with this electronic filing in GN Docket No. 12-264.

Staff thanked participants for their participation in the program and proposed that new schedulers for meetings would be circulated following the release of the Commission's third Measuring Broadband America Report on fixed broadband performance in order to accommodate participants supporting both efforts.

Sincerely,

A handwritten signature in blue ink, appearing to read 'James Miller', with a long horizontal flourish extending to the right.

James Miller, Senior Attorney Advisor
Electromagnetic Compatibility Division/OET
Federal Communications Commission
